

INTRODUCTION:-

Randack fasteners, SPECIALTY IN HIGH TENSILE FASTENERS – With specialty fasteners as a mission, Randack Fasteners India was promoted in technical collaboration with Randack Spezialschrauben, Germany, a pioneer in the field of specialized fasteners. Randack Fasteners India is an exemplary theme of India’s ability to match contemporary and World class manufacturing practices & meet the highly critical requirement of Indian & Global supply chain.

My starting date was June 1, 2022 and I am still working. I worked in the quality department for 1 month, where my role was to check the quality and dimensions of the parts produced on the CNC machine. After working in the quality department for a month, I was promoted to the production department. In my new role, I monitored the workers to increase output and ensured the timely completion of monthly production reports to meet customer requirements.

During my time in the production department, I gained knowledge about different standards and grade related to the production processes.

As a planning engineer, my roles and responsibilities revolves around overseeing project schedules, coordinating resources, and ensuring timely completion of project within budget constraints. We have different section, which we plan accordingly like forging, peeling, delta coating, hot dip galvanizing and production plan.

We provide fasteners to windmill company like Adani wind, Suzlon wind, Inox wind, Vestas wind , GE wind India etc.

I have created a flowchart to help everyone understand the planning process,

Production Planning Flow Chart
