

B. Tech. Syllabus

S3 and S4

Course No.	Course Name	L-T-P - Credits	Year of Introduction
MA201	LINEAR ALGEBRA AND COMPLEX ANALYSIS	3-1-0-4	2016
Prerequisite : Nil			
Course Objectives COURSE OBJECTIVES			
<ul style="list-style-type: none"> To equip the students with methods of solving a general system of linear equations. To familiarize them with the concept of Eigen values and diagonalization of a matrix which have many applications in Engineering. To understand the basic theory of functions of a complex variable and conformal Transformations. 			
Syllabus Analyticity of complex functions-Complex differentiation-Conformal mappings-Complex integration-System of linear equations-Eigen value problem			
Expected outcome . At the end of the course students will be able to (i) solve any given system of linear equations (ii) find the Eigen values of a matrix and how to diagonalize a matrix (iii) identify analytic functions and Harmonic functions. (iv) evaluate real definite Integrals as application of Residue Theorem (v) identify conformal mappings(vi) find regions that are mapped under certain Transformations

Module	Contents	Hours	Sem. Exam Marks
I	Complex differentiation Text 1[13.3,13.4] Limit, continuity and derivative of complex functions	3	15%
	Analytic Functions	2	
	Cauchy-Riemann Equation(Proof of sufficient condition of analyticity & C R Equations in polar form not required)-Laplace's Equation	2	
	Harmonic functions, Harmonic Conjugate	2	
II	Conformal mapping: Text 1[17.1-17.4] Geometry of Analytic functions Conformal Mapping,	1	15%
	Mapping $w = z^2$ conformality of $w = e^z$.	2	

	<p>The mapping $w = z + \frac{1}{z}$</p> <p>Properties of $w = \frac{1}{z}$</p> <p>Circles and straight lines, extended complex plane, fixed points</p> <p>Special linear fractional Transformations, Cross Ratio, Cross Ratio property-Mapping of disks and half planes</p> <p>Conformal mapping by $w = \sin z$ & $w = \cos z$</p> <p>(Assignment: Application of analytic functions in Engineering)</p>	1 3 3			
FIRST INTERNAL EXAMINATION					
III	<p><u>Complex Integration. Text 1[14.1-14.4] [15.4&16.1]</u></p> <p>Definition Complex Line Integrals, First Evaluation Method, Second Evaluation Method</p> <p>Cauchy's Integral Theorem(without proof), Independence of path(without proof), Cauchy's Integral Theorem for Multiply Connected Domains (without proof)</p> <p>Cauchy's Integral Formula- Derivatives of Analytic Functions(without proof)Application of derivative of Analytical Functions</p> <p>Taylor and Maclaurin series(without proof), Power series as Taylor series, Practical methods(without proof)</p> <p>Laurent's series (without proof)</p>	2 2 2 2	15%		
	IV	<p><u>Residue Integration Text 1 [16.2-16.4]</u></p> <p>Singularities, Zeros, Poles, Essential singularity, Zeros of analytic functions</p> <p>Residue Integration Method, Formulas for Residues, Several singularities inside the contour Residue Theorem.</p> <p>Evaluation of Real Integrals (i) Integrals of rational functions of $\sin\theta$ and $\cos\theta$ (ii) Integrals of the type $\int_0^{\infty} f(x)dx$ (Type I, Integrals from 0 to ∞)</p> <p>(Assignment : Application of Complex integration in Engineering)</p>		2 4 3	
		SECOND INTERNAL EXAMINATION			
		V		<p>Linear system of Equations Text 1(7.3-7.5)</p> <p>Linear systems of Equations, Coefficient Matrix, Augmented Matrix</p> <p>Gauss Elimination and back substitution, Elementary row operations, Row equivalent systems, Gauss elimination-Three possible cases, Row Echelon form and Information from it.</p>	1 5

	Linear independence-rank of a matrix Vector Space-Dimension-basis-vector space \mathbf{R}^3	2	
	Solution of linear systems, Fundamental theorem of non-homogeneous linear systems(Without proof)-Homogeneous linear systems (Theory only)	1	
VI	Matrix Eigen value Problem Text 1.(8.1,8.3 &8.4)		20%
	Determination of Eigen values and Eigen vectors-Eigen space	3	
	Symmetric, Skew Symmetric and Orthogonal matrices –simple properties (without proof)	2	
	Basis of Eigen vectors- Similar matrices Diagonalization of a matrix- Quadratic forms- Principal axis theorem(without proof) (Assignment-Some applications of Eigen values(8.2))	4	
END SEMESTER EXAM			

QUESTION PAPER PATTERN:

Maximum Marks : 100

Exam Duration: 3 hours

The question paper will consist of 3 parts.

Part A will have 3 questions of 15 marks each uniformly covering modules I and II. Each question may have two sub questions.

Part B will have 3 questions of 15 marks each uniformly covering modules III and IV. Each question may have two sub questions.

Part C will have 3 questions of 20 marks each uniformly covering modules V and VI. Each question may have three sub questions.

Any two questions from each part have to be answered.

Course No.	Course Name	L-T-P-Credits	Year of Introduction
ME201	MECHANICS OF SOLIDS	3-1-0-4	2016

Prerequisite: nil

Course Objectives:

1. To acquaint with the basic concepts of stress and deformation in solids.
2. To practice the methodologies to analyse stresses and strains in simple structural members, and to apply the results in simple design problems.

Syllabus

Analysis of deformable bodies : stress, strain, material behaviour, deformation in axially loaded bars, biaxial and triaxial deformation. Torsion of elastic circular members, design of shafts. Axial force, shear force and bending moment in beams. Stresses in beams: flexure and shear stress formulae, design of beams. Deflection of beams. Transformation equations for plane state of stress and strain, principal planes and stresses, Mohr's circle. Compound stresses: combined axial, flexural and shear loads – eccentric loading. Buckling: Euler's theory and Rankine's formula for columns.

Expected outcomes: At the end of the course students will be able to

1. Understand basic concepts of stress and strain in solids.
2. Determine the stresses in simple structural members such as shafts, beams, columns etc. and apply these results in simple design problems.
3. Determine principal planes and stresses, and apply the results to combined loading case.

9. P. N. Singh, P. K. Jha, Elementary Mechanics of Solids, Wiley Eastern Limited, 2012

Course Plan			
Module	Contents	Hours	Sem. Exam Marks
I	Introduction to analysis of deformable bodies – internal forces – method of sections – assumptions and limitations. Stress – stresses due to normal, shear and bearing loads – strength design of simple members. Definition of linear and shear strains.	3	15%
	Material behavior – uniaxial tension test – stress-strain diagrams concepts of orthotropy, anisotropy and inelastic behavior – Hooke's law for linearly elastic isotropic material under axial and shear deformation	3	
	Deformation in axially loaded bars – thermal effects – statically indeterminate problems – principle of superposition - elastic strain energy for uniaxial stress.	4	
II	Definition of stress and strain at a point (introduction to stress and strain tensors and its components only) – Poisson's ratio – biaxial and triaxial deformations – Bulk modulus - Relations between elastic	4	15%
	Torsion: Shafts - torsion theory of elastic circular bars – assumptions and limitations – polar modulus - torsional rigidity – economic cross-sections – statically indeterminate problems – shaft design for torsional load.	4	
FIRST INTERNAL EXAM			
III	Beams- classification - diagrammatic conventions for supports and loading - axial force, shear force and bending moment in a beam	2	15%
	Shear force and bending moment diagrams by direct approach	3	
	Differential equations between load, shear force and bending moment. Shear force and bending moment diagrams by summation approach – elastic curve – point of inflection.	5	
IV	Stresses in beams: Pure bending – flexure formula for beams assumptions and limitations – section modulus - flexural rigidity - economic sections – beam of uniform strength.	4	15%
	Shearing stress formula for beams – assumptions and limitations – design for flexure and shear.	4	
SECOND INTERNAL EXAM			
V	Deflection of beams: Moment-curvature relation – assumptions and limitations - double integration method – Macaulay's method - superposition techniques – moment area method and conjugate beam ideas for simple cases.	6	20%
	Transformation of stress and strains: Plane state of stress - equations of transformation - principal planes and stresses.	4	
VI	Mohr's circles of stress – plane state of strain – analogy between stress and strain transformation – strain rosettes	3	20%
	Compound stresses: Combined axial, flexural and shear loads – eccentric loading under tension/compression - combined bending and twisting loads.	4	

Theory of columns: Buckling theory –Euler’s formula for long columns – assumptions and limitations – effect of end conditions - slenderness ratio – Rankin’s formula for intermediate columns.	3	
END SEMESTER EXAM		

Question Paper Pattern

Total marks: 100, Time: 3 hrs

The question paper should consist of three parts

Part A

4 questions uniformly covering modules I and II. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part B

4 questions uniformly covering modules III and IV. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part C

6 questions uniformly covering modules V and VI. Each question carries 10 marks
Students will have to answer any four questions out of 6 (4X10 marks =40 marks)

Note: In all parts, each question can have a maximum of four sub questions, if needed.

Course code	Course Name	L-T-P - Credits	Year of Introduction
AU205	AUTOMOTIVE CHASSIS	3-1-0-4	2016
Prerequisite : Nil			
Course Objectives			
<ul style="list-style-type: none"> To study about various components of Automobile chassis with their constructional details and understanding the concept of working various components. To know the application of the components in various automobiles 			
Syllabus			
Introduction- Types of automobiles- chassis layout - Frames and body- chassis – Frames - integral body. Design features of a body – Body accessories – Drive axles - Differential – Suspension – Wheels and Tyres – Wheel geometry- Steering mechanisms – Braking system			
Expected outcome.			
<ul style="list-style-type: none"> After this course the student will be able to explain the constructional details and the structure of drive line, steering, braking system and suspension system in a vehicle. 			
Text Books:			
<ol style="list-style-type: none"> Kripal Singh, Automobile Engineering, Vol I and Vol II, Standard Publisher, New Delhi , 2006 P.S. Gill, A Textbook Of Automobile Engineering-II, S.K. Khataria & Sons., 2nd Edition, 2012 R.K. Rajput, A Text-Book of Automobile Engineering, Laxmi Publications Private Limited, 2007 3 N.K. Giri, Automotive Mechanics, Kanna Publishers, 2007

Course Plan			
Module	Contents	Hours	Sem.ExamMarks
I	Introduction: Profile of Automobile Industry, Types of automobiles, general considerations relating to chassis layout and power plant Location, relative merits & demerits of different layouts, description of different types of chassis layout. Frames and body: Role and requirement of a chassis frame. loads acting on frames	9	15%
II	Types of chassis – Light, medium and heavy duty vehicle chassis, ladder chassis, Types of Frames (conventional, integral construction and perimeter frame) materials, cross members and X members, frame sections, defects in frames, frame repairs, frame alignment. integral body. Design features of a body – Types of bodies, coach built, convertibles. Body accessories, bumpers..	9	15%
FIRST INTERNAL EXAMINATION			
III	Torque reaction, driving thrust, Hotchkiss drive, torque tube drive, propeller shaft, universal joints, types,	9	15%

	Construction and Design of Drive Axles, Types of Loads acting on drive axles, Full – Floating, Three-Quarter Floating and Semi-Floating Axles, Axle Housings and Types, Differential principle and types, Differential housings, Non-Slip differential, Differential locks, double reduction and twin speed final drives, multi axle vehicles		
IV	Suspension: Objectives, types of springs, spring materials, leaf spring – Single and Multileaf, helper springs, coil spring, torsion bar, rubber & pneumatic suspension, Hydro-elastic suspension, shock absorbers – types and constructional details. Wheels and tyres: Types of wheel, construction of wired wheel, disc wheel, tyre type & construction, aspect ratio, specification of tyres, tyre rotation, static & rolling properties of pneumatic tyres	9	15%
SECOND INTERNAL EXAMINATION			
V	Types of Front Axles and Stub Axles, Front Wheel Geometry, viz., Castor, Camber, King Pin Inclination and Toe-in, Condition for True Rolling Motion of Wheels during Steering, Ackerman's and Davis Steering Mechanisms, Steering Linkages, Different Types of Steering Gear mechanisms, Slip Angle, Over-Steer and Under-Steer, Reversible and Irreversible Steering, Power and Power-Assisted Steering	9	20%
VI	Theory of Automobile Braking, Stopping Distance Time and Braking Efficiency, Effect of Weight Transfer during Braking, Theory of Drum Brakes, Leading and Trailing Shoes, Braking Torque, Constructional Details of Drum Brake and its Activators, Disc Brake Theory, Types and Construction, Hydraulic Braking System, Mechanical Braking System, Pneumatic Braking System, Power-Assisted Braking System, Servo Brakes, Retarders, Types and Construction, Anti-Lock Braking Fundamentals.	9	20%

Course No.	Course Name	L-T-P-Credits	Year of Introduction
ME205	THERMODYNAMICS	3-1-0-4	2016

Prerequisite: nil

Course Objectives:

1. To understand basic thermodynamic principles and laws
2. To develop the skills to analyze and design thermodynamic systems

Syllabus

Basic concepts, zeroth law of thermodynamics and thermometry, energy, first law of thermodynamics, second law of thermodynamics, entropy, irreversibility and availability, third law of thermodynamics pure substances, equations of state, properties of gas mixtures, Introduction to ideal binary solutions, general thermodynamic relationships, combustion thermodynamics

Expected outcome: At the end of the course the students will be able to

1. Understand the laws of thermodynamics and their significance
2. Apply the principles of thermodynamics for the analysis of thermal systems

Text Books

1. P.K.Nag, Engineering Thermodynamics, McGraw Hill,2013
2. E.Rathakrishnan Fundamentals of Engineering Thermodynamics, PHI,2005

References Books:

Steam Tables/Data book

5. R.S.Khurmi, Steam table with Mollier chart, S.Chand,2008

Course Plan			
Module	Contents	Hours	Sem. Exam Marks
I	Role of Thermodynamics in Engineering and Science -- Applications of Thermodynamics Basic Concepts - Macroscopic and Microscopic viewpoints, Concept of Continuum, Thermodynamic System and Control Volume, Surrounding, Boundaries, Types of Systems, Universe, Thermodynamic properties, Process, Cycle, Thermodynamic Equilibrium, Quasi - static Process, State, Point and Path function. (Review only- self study) Zeroth Law of Thermodynamics, Measurement of Temperature- Thermometry, reference Points, Temperature Scales, Ideal gas temperature scale, Comparison of thermometers-Gas Thermometers, Thermocouple, Resistance thermometer Energy - Work - Pdv work and other types of work transfer, free expansion work, heat and heat capacity.	7	15%
II	Joule's Experiment- First law of Thermodynamics - First law applied to Non flow Process- Enthalpy- specific heats- PMM1, First law applied to Flow Process, Mass and Energy balance in simple steady flow process. Applications of SFEE, Transient flow -Filling and Emptying Process. (Problems), Limitations of the First Law.	8	15%
FIRST INTERNAL EXAM			
III	Second Law of Thermodynamics, Thermal Reservoir, Heat Engine, Heat pump - Performance factors, Kelvin-Planck and Clausius Statements, Equivalence of two statements, Reversibility, Irreversible Process, Causes of Irreversibility, Corollaries of second law, PMM2, Carnot's theorem and its corollaries, Absolute Thermodynamic Temperature scale. Clausius Inequality, Entropy- Causes of Entropy Change, Entropy changes in various thermodynamic processes, principle of increase of entropy and its applications, Entropy generation in open and closed system, Entropy and Disorder, Reversible adiabatic process- isentropic process	10	15%
IV	Available Energy, Availability and Irreversibility- Useful work, Dead state, Availability function, Availability and irreversibility in open and closed systems - Gouy-Stodola theorem , Third law of thermodynamics. Pure Substances, Phase Transformations, Triple point, properties during change of phase, T-v, p-v and p-T diagram of pure substance, p-v-T surface, Saturation pressure and Temperature, T-h and T-s diagrams, h-s diagrams or Mollier Charts, Dryness Fraction, steam tables. Property calculations using steam tables.	10	15%
SECOND INTERNAL EXAM			

V	<p>The ideal Gas Equation, Characteristic and Universal Gas constants, Deviations from ideal Gas Model: Equation of state of real substances- Vander Waals Equation of State, Berthelot, Dieterici, and Redlich-Kwong equations of state , Virial Expansion, Compressibility factor, Law of corresponding state, Compressibility charts</p> <p>Mixtures of ideal Gases – Mole Fraction, Mass fraction, Gravimetric and volumetric Analysis, Dalton’s Law of partial pressure, Amagat’s Laws of additive volumes, Gibbs-Dalton’s law -Equivalent Gas constant and Molecular Weight, Properties of gas mixtures: Internal Energy, Enthalpy, specific heats and Entropy, Introduction to real gas mixtures- Kay’s rule.</p> <p>*Introduction to ideal binary solutions, Definition of solution, ideal binary solutions and their characteristics, Deviation from ideality, Raoult’s Law, Phase diagram, Lever rule>(*in this section numerical problems not.)</p>	11	20%
VI	<p>General Thermodynamic Relations – Combined First and Second law equations – Helmholtz and Gibb’s functions - Maxwell’s Relations, Tds Equations, The Clapeyron Equation, equations for internal energy, enthalpy and entropy, specific heats, Throttling process, Joule Thomson Coefficient, inversion curve.</p> <p>*Introduction to thermodynamics of chemically reacting systems, Combustion, Thermochemistry – Theoretical and Actual combustion processes- Definition and significance of equivalence ratio, enthalpy of formation , enthalpy of combustion and heating value (*in this section numerical problems not included)</p>	10	20%
END SEMESTER EXAM			

Question Paper Pattern

Total marks: 100, Time: 3 hrs

Approved steam tables permitted

The question paper should consist of three parts

Part A

4 questions uniformly covering modules I and II. Each question carries 10 marks

Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part B

4 questions uniformly covering modules III and IV. Each question carries 10 marks

Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part C

6 questions uniformly covering modules V and VI. Each question carries 10 marks

Students will have to answer any four questions out of 6 (4X10 marks =40 marks)

Note: In all parts, each question can have a maximum of four sub questions, if needed.

Course No.	Course Name	L-T-P-Credits	Year of Introduction
ME210	METALLURGY AND MATERIALS ENGINEERING	3-0-0-3	2016
Prerequisite: nil			
Course Objectives:			
<ol style="list-style-type: none"> To provide fundamental science relevant to materials To provide physical concepts of atomic radius, atomic structure, chemical bonds, crystalline and non-crystalline materials and defects of crystal structures, grain size, strengthening mechanisms, heat treatment of metals with mechanical properties and changes in structure To enable students to be more aware of the behavior of materials in engineering applications and select the materials for various engineering applications. To understand the causes behind metal failure and deformation To determine properties of unknown materials and develop an awareness to apply this knowledge in material design. 			
Syllabus: -Chemical bonds – crystallography- imperfections- crystallization- diffusion- phase diagrams-heat treatment – strengthening mechanisms- hot and cold working – alloying- ferrous and non ferrous alloys- fatigue-creep- basics, need, properties and applications of modern engineering materials.			
Expected outcome: At the end of the course students will be able to			
<ol style="list-style-type: none"> Identify the crystal structures of metallic materials. Analyze the binary phase diagrams of alloys Fe-Fe₃C, etc. Correlate the microstructure with properties, processing and performance of metals. Recognize the failure of metals with structural change. Select materials for design and construction. Apply core concepts in materials science to solve engineering problems.

Course Plan			
Module	Contents	Hours	Semester Exam. Marks
I	Earlier and present development of atomic structure; attributes of ionization energy and conductivity, electronegativity and alloying; correlation of atomic radius to strength; electron configurations; electronic repulsion Primary bonds: - characteristics of covalent, ionic and metallic bond; attributes of bond energy, cohesive force, density, directional and non-directional and ductility. properties based on atomic bonding:- attributes of deeper energy well and shallow energy well to melting temperature, coefficient of thermal expansion - attributes of modulus of elasticity in metal cutting process -Secondary bonds:- classification- hydrogen bond and anomalous behavior of ice float on water, application- atomic mass unit and specific heat, application. <i>(brief review only, no University questions and internal assessment from these portions).</i>	2	15%
	Crystallography:- Crystal, space lattice, unit cell- BCC, FCC, HCP structures - short and long range order - effects of crystalline and amorphous structure on mechanical properties.	1	
	Coordination number and radius ratio; theoretical density; simple problems - Polymorphism and allotropy.	1	
	Miller Indices: - crystal plane and direction <i>(brief review)</i> - Attributes of miller indices for slip system, brittleness of BCC, HCP and ductility of FCC - Modes of plastic deformation: - Slip and twinning.	1	
	Schmid's law, equation, critical resolved shear stress, correlation of slip system with plastic deformation in metals and applications.	1	
II	Mechanism of crystallization: Homogeneous and heterogeneous nuclei formation, under cooling, dendritic growth, grain boundary irregularity.	1	15%
	Effects of grain size, grain size distribution, grain shape, grain orientation on dislocation/strength and creep resistance - Hall - Petch theory, simple problems	1	
	Classification of crystal imperfections: - types of dislocation - effect of point defects on mechanical properties - forest of dislocation, role of surface defects on crack initiation.	1	

	Burgers vector –dislocation source, significance of Frank Read source in metals deformation - Correlation of dislocation density with strength and nano concept, applications.	1	
	Significance high and low angle grain boundaries on dislocation – driving force for grain growth and applications during heat treatment.	1	
	Polishing and etching to determine the microstructure and grain size.	1	
	Fundamentals and crystal structure determination by X – ray diffraction, simple problems –SEM and TEM.	1	
	Diffusion in solids, Fick's laws, mechanisms, applications of diffusion in mechanical engineering, simple problems.	1	
	FIRST INTERNAL EXAMINATION		
III	Phase diagrams: - Limitations of pure metals and need of alloying - classification of alloys, solid solutions, Hume Rothery's rule - equilibrium diagram of common types of binary systems: five types.	2	15%
	Coring - lever rule and Gibb's phase rule - Reactions: - monotectic, eutectic, eutectoid, peritectic, peritectoid.	1	
	Detailed discussion on Iron-Carbon equilibrium diagram with microstructure and properties changes in austenite, ledeburite, ferrite, cementite, special features of martensite transformation, bainite, spheroidite etc.	1	
	Heat treatment: - Definition and necessity – TTT for a eutectoid iron-carbon alloy, CCT diagram, applications - annealing, normalizing, hardening, spheroidizing.	1	
	Tempering:- austempering, martempering and ausforming - Comparative study on ductility and strength with structure of pearlite, bainite, spherodite, martensite, tempered martensite and ausforming.	1	
	Hardenability, Jominy end quench test, applications-Surface hardening methods:- no change in surface composition methods :- Flame, induction, laser and electron beam hardening processes- change in surface composition methods :carburizing and Nitriding; applications.	2	

IV	Types of Strengthening mechanisms: - work hardening, equation - precipitation strengthening and over ageing-dispersion hardening.	1	15%
	Cold working: Detailed discussion on strain hardening; recovery; re-crystallization, effect of stored energy; re-crystallization temperature - hot working Bauschinger effect and attributes in metal forming.	1	
	Alloy steels:- Effects of alloying elements on steel; dislocation movement, polymorphic transformation temperature, alpha and beta stabilizers, formation and stability of carbides, grain growth, displacement of the eutectoid point, retardation of the transformation rates, improvement in corrosion resistance, mechanical properties	1	
	Nickel steels, Chromium steels etc. - Enhancement of steel properties by adding alloying elements: - Molybdenum, Nickel, Chromium, Vanadium, Tungsten, Cobalt, Silicon, Copper and Lead.	1	15%
	High speed steels:- Mo and W types, effect of different alloying elements in HSS	1	
	Cast irons: Classifications; grey, white, malleable and spheroidal graphite cast iron etc, composition, microstructure, properties and applications.	1	
Principal Non ferrous Alloys: - Aluminum, Copper, Magnesium, Nickel, study of composition, properties, applications, reference shall be made to the phase diagrams whenever necessary.	1		
SECOND INTERNAL EXAMINATION			
V	Fatigue: - Stress cycles – Primary and secondary stress raisers - Characteristics of fatigue failure, fatigue tests, S-N curve.	1	20%
	Factors affecting fatigue strength: stress concentration, size effect, surface roughness, change in surface properties, surface residual stress.	1	
	Ways to improve fatigue life – effect of temperature on fatigue, thermal fatigue and its applications in metal cutting	1	
	Fracture: – Brittle and ductile fracture – Griffith theory of brittle fracture – Stress concentration, stress raiser – Effect of plastic deformation on crack propagation.	1	
	transgranular, intergranular fracture - Effect of impact loading on ductile material and its application in forging, applications - Mechanism of fatigue failure.	1	

	Structural features of fatigue: - crack initiation, growth, propagation - Fracture toughness (definition only) - Ductile to brittle transition temperature (DBTT) in steels and structural changes during DBTT, applications.	1	
VI	Creep: - Creep curves – creep tests - Structural change: deformation by slip, sub-grain formation, grain boundary sliding	1	20%
	Mechanism of creep deformation - threshold for creep, prevention against creep - Super plasticity: need and applications	1	
	Composites:- Need of development of composites - geometrical and spatial Characteristics of particles – classification - fiber phase: - characteristics, classifications - matrix phase:- functions – only need and characteristics of PMC, MMC, and CMC – applications of composites: aircraft applications, aerospace equipment and instrument structure, industrial applications of composites, marine applications, composites in the sporting goods industry, composite biomaterials..	2	
	Modern engineering materials: - only fundamentals, need, properties and applications of, intermetallics, maraging steel, super alloys, Titanium – introduction to nuclear materials, smart materials and bio materials.	2	
	Ceramics:-coordination number and radius ratios- AX, A_nX_m , $A_mB_nX_p$ type structures – applications.	1	

Question Paper Pattern

Total marks: 100, Time: 3 hrs

The question paper should consist of three parts

Part A

4 questions uniformly covering modules I and II. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part B

4 questions uniformly covering modules III and IV. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part C

6 questions uniformly covering modules V and VI. Each question carries 10 marks
Students will have to answer any four questions out of 6 (4X10 marks =40 marks)

Note: In all parts, each question can have a maximum of four sub questions, if needed.

HS200	Business Economics	3-0-0-3	2016
Prerequisite: Nil			
Course Objectives <ul style="list-style-type: none"> • To familiarize the prospective engineers with elementary Principles of Economics and Business Economics. • To acquaint the students with tools and techniques that are useful in their profession in Business Decision Making which will enhance their employability; • To apply business analysis to the “firm” under different market conditions; • To apply economic models to examine current economic scenario and evaluate policy options for addressing economic issues • To gain understanding of some Macroeconomic concepts to improve their ability to understand the business climate; • To prepare and analyse various business tools like balance sheet, cost benefit analysis and rate of returns at an elementary level 			
Syllabus Business Economics - basic concepts, tools and analysis, scarcity and choices , resource allocation, marginal analysis, opportunity costs and production possibility curve. Fundamentals of microeconomics - Demand and Supply Analysis, equilibrium, elasticity, production and production function, cost analysis, break-even analysis and markets. Basics of macroeconomics - the circular flow models, national income analysis, inflation, trade cycles, money and credit, and monetary policy. Business decisions - investment analysis, Capital Budgeting decisions, forecasting techniques and elementary Balance Sheet and taxation, business financing, international investments			
Expected outcome . A student who has undergone this course would be able to <ol style="list-style-type: none"> i. make investment decisions based on capital budgeting methods in alignment with microeconomic and macroeconomic theories. ii. able to analyse the profitability of the firm, economy of operation, determination of price under various market situations with good grasp on the effect of trade cycles in business. iii. gain knowledge on Monetary theory, measures by RBI in controlling interest rate and emerging concepts like Bit Coin. iv. gain knowledge of elementary accounting concepts used for preparing balance sheet and interpretation of balance sheet

Course Plan

Module	Contents	Hours	Sem. Exam Marks
I	Business Economics and its role in managerial decision making-meaning-scope-relevance-economic problems-scarcity Vs choice (2 Hrs)-Basic concepts in economics-scarcity, choice, resource allocation- Trade-off-opportunity cost-marginal analysis- marginal utility theory, Law of diminishing marginal utility -production possibility curve (2 Hrs)	4	15%
II	Basics of Micro Economics I Demand and Supply analysis-equilibrium-elasticity (demand and supply) (3 Hrs.) -Production concepts-average product-marginal product-law of variable proportions- Production function-Cobb Douglas function-problems (3 Hrs.)	6	15%
FIRST INTERNAL EXAMINATION			
III	Basics of Micro Economics II Concept of costs-marginal, average, fixed, variable costs-cost curves-shut down point-long run and short run (3 Hrs.)- Break Even Analysis-Problem-Markets-Perfect Competition, Monopoly and Monopolistic Competition, Oligopoly-Cartel and collusion (3 Hrs.).	6	15%
IV	Basics of Macro Economics - Circular flow of income-two sector and multi-sector models- National Income Concepts-Measurement methods-problems-Inflation, deflation (4 Hrs.)-Trade cycles-Money-stock and flow concept-Quantity theory of money-Fischer's Equation and Cambridge Equation -velocity of circulation of money-credit control methods-SLR, CRR, Open Market Operations-Repo and Reverse Repo rate-emerging concepts in money-bit coin (4 Hrs.).	8	15%

SECOND INTERNAL EXAMINATION			
V	Business Decisions I -Investment analysis-Capital Budgeting-NPV, IRR, Profitability Index, ARR, Payback Period (5 Hrs.)- Business decisions under certainty-uncertainty-selection of alternatives-risk and sensitivity- cost benefit analysis-resource management (4 Hrs.).	9	20%
VI	Business Decisions II Balance sheet preparation-principles and interpretation-forecasting techniques (7 Hrs.)-business financing-sources of capital- Capital and money markets-international financing-FDI, FPI, FII-Basic Principles of taxation-direct tax, indirect tax-GST (2 hrs.).	9	20%
END SEMESTER EXAM			

Question Paper Pattern

Max. marks: 100, Time: 3 hours

The question paper shall consist of three parts

Part A

4 questions uniformly covering modules I and II. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part B

4 questions uniformly covering modules III and IV. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part C

6 questions uniformly covering modules V and VI. Each question carries 10 marks
Students will have to answer any four questions out of 6 (4X10 marks =40 marks)

Note: In all parts, each question can have a maximum of four sub questions, if needed.

Course code	Course Name	L-T-P - Credits	Year of Introduction												
AU231	Computer Aided M/C & Auto Components Drafting Lab	0-0-3 -1	2016												
Prerequisite : Nil															
Course Objectives															
<ul style="list-style-type: none"> To study the capabilities of software for Drafting and Modeling To develop skill to use software to create 2D and 3D models To introduce the students the Indian standard code of practice for engineering drawing 															
List of Exercises/Experiments															
<ol style="list-style-type: none"> Review of graphic interface of the software. Review of basic sketching commands and navigational commands. Starting a new drawing sheet. Sheet sizes. Naming a drawing. Drawing units, grid and snap. Drawing and Sections of Solids: Sections of Pyramids, Prisms, Cubes, Tetrahedrons, Cones and Cylinders resting only on their bases (No problems on, axis inclinations, spheres and hollow solids). True shape of sections. Orthographic Views: Conversion of pictorial views into orthographic projections of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings) Hidden line conventions. Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut. Flanged nut, slotted nut, taper and split pin for locking, counter sunk head screw, grub screw, Allen screw. Assembly Drawings of the following components (Part drawings should be given) <table border="0"> <tr> <td>a). Plummer block</td> <td>b) Rams Bottom Safety Valve</td> </tr> <tr> <td>c) I.C. Engine connecting rod</td> <td>d) Screw jack</td> </tr> <tr> <td>e) Tailstock of lathe</td> <td>f) Tool Head of a shaper</td> </tr> <tr> <td>g) Piston Assembly</td> <td>h) Injector</td> </tr> <tr> <td>i) Couplings</td> <td>j) Diaphragm Regulator valve</td> </tr> <tr> <td>k) Clutch Assembly</td> <td></td> </tr> </table> 				a). Plummer block	b) Rams Bottom Safety Valve	c) I.C. Engine connecting rod	d) Screw jack	e) Tailstock of lathe	f) Tool Head of a shaper	g) Piston Assembly	h) Injector	i) Couplings	j) Diaphragm Regulator valve	k) Clutch Assembly	
a). Plummer block	b) Rams Bottom Safety Valve														
c) I.C. Engine connecting rod	d) Screw jack														
e) Tailstock of lathe	f) Tool Head of a shaper														
g) Piston Assembly	h) Injector														
i) Couplings	j) Diaphragm Regulator valve														
k) Clutch Assembly															
Expected outcome.															
<ul style="list-style-type: none"> Ability to create 2D and 3D models of Engineering Components using the software package. Ability to develop engineering drawing for the industrial component as per Indian Standard code of practice. Ability to prepare assembly drawings from detailed drawings.

Course No.	Course Name	L-T-P - Credits	Year of Introduction
MA202	Probability distributions, Transforms and Numerical Methods	3-1-0-4	2016
Prerequisite: Nil			
Course Objectives <ul style="list-style-type: none"> To introduce the concept of random variables, probability distributions, specific discrete and continuous distributions with practical application in various Engineering and social life situations. To know Laplace and Fourier transforms which has wide application in all Engineering courses. To enable the students to solve various engineering problems using numerical methods. 			
Syllabus Discrete random variables and Discrete Probability Distribution. Continuous Random variables and Continuous Probability Distribution. Fourier transforms. Laplace Transforms. Numerical methods-solution of Algebraic and transcendental Equations, Interpolation. Numerical solution of system of Equations. Numerical Integration, Numerical solution of ordinary differential equation of First order.			
Expected outcome . After the completion of the course student is expected to have concept of (i) Discrete and continuous probability density functions and special probability distributions. (ii) Laplace and Fourier transforms and apply them in their Engineering branch (iii) numerical methods and their applications in solving Engineering problems.			
Text Books: <ol style="list-style-type: none"> Miller and Freund's "Probability and statistics for Engineers"-Pearson-Eighth Edition. Erwin Kreyszig, "Advanced Engineering Mathematics", 10th edition, Wiley, 2015.

Canale, "Numerical Methods for Engineers"-Sixth Edition-Mc Graw Hill. 			
Course Plan			
Module	Contents	Hours	Sem. Exam Marks
I	Discrete Probability Distributions. (Relevant topics in section 4.1,4.2,4.4,4.6 Text I)		
	Discrete Random Variables, Probability distribution function, Cumulative distribution function.	2	
	Mean and Variance of Discrete Probability Distribution.	2	
	Binomial Distribution-Mean and variance.	2	
	Poisson Approximation to the Binomial Distribution. Poisson distribution-Mean and variance.	2	
			15%

II	Continuous Probability Distributions. (Relevant topics in section 5.1,5.2,5.5,5.7 Text1)		
	Continuous Random Variable, Probability density function, Cumulative density function, Mean and variance.	2	
	Normal Distribution, Mean and variance (without proof).	4	
	Uniform Distribution, Mean and variance.	2	
	Exponential Distribution, Mean and variance.	2	15%
FIRST INTERNAL EXAMINATION			
III	Fourier Integrals and transforms. (Relevant topics in section 11.7, 11.8, 11.9 Text2)		15%
	Fourier Integrals. Fourier integral theorem (without proof).	3	
	Fourier Transform and inverse transform.	3	
	Fourier Sine & Cosine Transform, inverse transform.	3	
IV	Laplace transforms. (Relevant topics in section 6.1,6.2,6.3,6.5,6.6 Text2)		15%
	Laplace Transforms, linearity, first shifting Theorem.	3	
	Transform of derivative and Integral, Inverse Laplace transform, Solution of ordinary differential equation using Laplace transform.	4	
	Unit step function, second shifting theorem.	2	
	Convolution Theorem (without proof).	2	
	Differentiation and Integration of transforms.	2	
	SECOND INTERNAL EXAMINATION		
V	Numerical Techniques. (Relevant topics in section.19.1,19.2,19.3 Text2)		20%
	Solution Of equations by Iteration, Newton- Raphson Method.	2	
	Interpolation of Unequal intervals-Lagrange's Interpolation formula.	2	
	Interpolation of Equal intervals-Newton's forward difference formula, Newton's Backward difference formula.	3	
VI	Numerical Techniques. (Relevant topics in section 19.5,20.1,20.3, 21.1 Text2)		20%
	Solution to linear System- Gauss Elimination, Gauss Seidal Iteration Method.	3	
	Numeric Integration-Trapezoidal Rule, Simpson's 1/3 Rule.	3	
	Numerical solution of firstorder ODE-Euler method,	3	
	Runge-Kutta Method (fourth order).		
END SEMESTER EXAM			

QUESTION PAPER PATTERN:

Maximum Marks : 100

Exam Duration: 3 hours

The question paper will consist of 3 parts.

Part A will have 3 questions of 15 marks each uniformly covering modules I and II. Each question may have two sub questions.

Part B will have 3 questions of 15 marks each uniformly covering modules III and IV. Each question may have two sub questions.

Part C will have 3 questions of 20 marks each uniformly covering modules V and VI. Each question may have three sub questions.

Any two questions from each part have to be answered.

Course code	Course Name	L-T-P - Credits	Year of Introduction
ME212	FLUID MECHANICS	3-1-0-4	2016
Prerequisite : Nil			
Course Objectives			
<ul style="list-style-type: none"> To establish fundamental knowledge of basic fluid mechanics and address specific topics relevant to simple applications involving fluids To familiarize students with the relevance of fluid dynamics to many engineering systems 			
Syllabus			
Fluid Properties, Kinematics of fluid flow, Fluid Statics, Dynamics of fluid flow, Flow through pipes, Concept of Boundary Layer, Dimensional Analysis and Hydraulic similitude			
Expected outcome			
At the end of the course students will			
<ol style="list-style-type: none"> Become conversant with the concepts of flow measurements and flow through pipes Be able to apply the momentum and energy equations to fluid flow problems. Be able to evaluate head loss in pipes and conduits. Be able to use dimensional analysis to design physical or numerical experiments and to apply dynamic similarity 			
Text Books:

H, Mechanics of Fluids, McGraw Hill, 1992. White F.M., Fluid Mechanics, 6/e, Tata McGraw Hill, 2008 			
Course Plan			
Module	Contents	Hours	Sem. Exam Marks
I	Introduction: Fluids and continuum. Physical properties of fluids, density, specific weight, vapour pressure, Newton's law of viscosity. Ideal and real fluids, Newtonian and non-Newtonian fluids. Fluid Statics- Pressure-density-height relationship, manometers, pressure on plane and curved surfaces, center of pressure, buoyancy, stability of immersed and floating bodies, fluid masses subjected to uniform accelerations, measurement of pressure	8	15%
II	Kinematics of fluid flow: Eulerian and Lagrangian approaches, classification of fluid flow, 1-D, 2-D and 3-D flow, steady, unsteady, uniform, non-uniform, laminar, turbulent, rotational, irrotational	8	15%

	flows, stream lines, path lines, streak lines, stream tubes, velocity and acceleration in fluid, circulation and vorticity, stream function and potential function, Laplace equation, equipotential lines flow nets, uses and limitations		
FIRST INTERNAL EXAMINATION			
III	Dynamics of Fluid flow: Fluid Dynamics: Energies in flowing fluid, head, pressure, dynamic, static and total head. Control volume analysis of mass, momentum and energy. Equations of fluid dynamics: Differential equations of mass, energy and momentum (Euler's equation), Navier-Stokes equations (without proof) in rectangular and cylindrical co-ordinates, Bernoulli's equation and its applications: Venturi and Orifice meters, Notches and Weirs (description only for notches and weirs). Hydraulic coefficients.	9	15%
IV	Pipe Flow: Viscous flow: Reynolds experiment, significance of Reynolds number, critical Reynolds number, shear stress and velocity distribution in a pipe, law of fluid friction, head loss due to friction, Hagen Poiseuille equation. Turbulent flow: Darcy- Weisbach equation, Chezy's equation Moody's chart, Major and minor energy losses, hydraulic gradient and total energy line, flow through long pipes, pipes in series, pipes in parallel, equivalent pipe, siphon, transmission of power through pipes, efficiency of transmission, Water hammer, Cavitation.	10	15%
SECOND INTERNAL EXAMINATION			
V	Concept of Boundary Layer : Growth of boundary layer over a flat plate and definition of boundary layer thickness, displacement thickness, momentum thickness and energy thickness, laminar and turbulent boundary layers, laminar sub layer, velocity profile, Von-Karman momentum integral equations for the boundary layers, calculation of drag, separation of boundary and methods of control.	10	20%
VI	Dimensional Analysis and Hydraulic similitude: Dimensional analysis, Buckingham's theorem, important dimensional numbers and their significance, geometric, Kinematic and dynamic similarity, model studies. Froude, Reynold, Weber, Cauchy and Mach laws- Applications and limitations of model testing. simple problems only	10	20%
END SEMESTER EXAM			

Question Paper Pattern

Maximum marks: 100,

Exam duration: 3 hours

The question paper shall consist of three parts.

Part A

4 questions uniformly covering modules I and II. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part B

4 questions uniformly covering modules III and IV. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part C

6 questions uniformly covering modules V and VI. Each question carries 10 marks
Students will have to answer any four questions out of 6 (4X10 marks =40 marks)

Note: In all parts, each question can have a maximum of four sub questions, if needed.

Course code	Course Name	L-T-P - Credits	Year of Introduction
ME214	Theory of Machines	4-0-0-4	2016
Prerequisite : Nil			
Course Objectives			
<ul style="list-style-type: none"> To impart basic knowledge on kinematics of mechanisms and machines. To understand kinematic synthesis of mechanisms. To analyse the motion resulting from a specified set of linkages in a mechanism. To study the principles involved in assessing the displacement, velocity and acceleration at any point in a link of a mechanism. To study the application of friction in different devices. To study the power transmission devices 			
Syllabus			
Kinematics – velocity and acceleration- Friction – Brakes – Gear – Cams- Gyroscope - Flywheel Governors- Static and dynamic balancing - Vibration			
Expected outcome.			
<ul style="list-style-type: none"> After the course, students will understand the various aspects of mechanisms and machines and will be able to solve design problems in the area of mechanisms and machines. 			
Text Books			
<ol style="list-style-type: none"> P L Ballaney, Theory of Machines and Mechanisms, Khanna Publishers S S. Rattan-Theory of machines, McGraw Hill 			
References:			
<ol style="list-style-type: none"> J. E. Shigley and J.J Uicker, Theory of Machines and Mechanisms, McGraw-Hill. T. Bevan T., Theory of Machines- A Text Book for Engineering Students, Pearson. Mallick, Theory of Machines and Mechanisms, Affiliated East West Press. V.P. Singh, Theory of machines, Dhanpat Rai. 			
Course Plan			
Module	Contents	Hours	Sem.ExamMarks
I	Kinematics - links, mechanism, Degrees of freedom, Grashoff's law, four-bar chain, Slider crank chain, inversions and practical applications. Automobile steering mechanisms: Davis and Ackermann steering mechanisms. Velocity and acceleration diagrams of simple mechanisms. Coriolis acceleration (Theory only). Friction - Pressure and wear theories, pivot and collar friction, Single and multiple disc clutches..	10	15%

II	Brakes - block and band brakes, self energizing and self-locking in braking. Gear – Different types of gears- Nomenclature of spur and helical gears, Law of gearing, Gear trains - Simple, compound gear trains and epicyclic gear trains.	9	15%
FIRST INTERNAL EXAMINATION			
III	Cams - types of cams, cam profiles for knife edged and roller followers with and without offsets for SHM, constant acceleration-deceleration, constant velocity and cycloidal motion.	8	15%
IV	Gyroscope –Gyroscopic torque, gyroscopic stabilization of ships and aeroplanes. Flywheel - Turning moment diagrams, fluctuation of energy.	8	15%
SECOND INTERNAL EXAMINATION			
V	Governors - types of governors, simple watt governor - Porter, Proell governors-, Isochronisms, hunting, sensitivity and stability. Hartnell governor. Static and dynamic balancing of rotating mass- Single and several masses in different planes, balancing of reciprocating mass, Dynamic analysis of slider crank mechanism.	10	20%
VI	Vibration - kinematics of vibrating motion, vibration systems having single degree of freedom, free and forced vibration, damped vibration. Torsional vibrations -Transverse vibration, whirling of shaft (Description only).	9	20%
END SEMESTER EXAM			

Question Paper Pattern

M. Heldt – High speed diesel engines, Chillon Co. New York. William H Crouse / Donald L. Anglin, Automotive Mechanics , Tata McGraw-Hill Publishers 			
Course Plan			
Module	Contents	Hours	Sem.ExamMarks
I	Introduction: Types of power plant, Basic engine nomenclature, classification of IC engines (Classification by cylinder arrangement, Valve arrangement and Type of valves), Engine cycles, Comparison of SI and CI engines, working of 2 -stroke and 4 stroke engines with relative merits and demerits, Numbering of cylinders, firing order.	7	15%
II	Constructional details of engine components: Moving parts and stationary parts, engine block, Cylinder block and crank case-types, cylinder liners, types of cylinder head, gasket materials, piston types, piston rings, piston pins,	7	15%

	connecting rod, crank shaft, flywheel, vibration damper, Main Bearings, camshaft, camshaft drives, Types of valve and valve seats, valve actuating mechanisms (mechanisms with side camshaft and overhead camshaft), inlet and exhaust manifold construction, hydraulic tappets.		
FIRST INTERNAL EXAMINATION			
III	Lubrication system: Function of lubrication system, lubrication principles, classification of lubricants, types of lubricants, properties of lubricants, service ratings of oils, oil additives, specification of lubricants, crankcase ventilation, lubrication systems (Mist, Wet sump Dry sump lubrication systems), pre-lubrication systems, effect of engine conditions on lubricating oil, consumption of lubricating oil, Components of lubrication system (oil strainers, oil filters, oil pumps, oil coolers), chassis lubrication.	7	15%
IV	Cooling system: Necessity of engine cooling and correct operating temperatures, types of cooling systems like Direct air cooling, Indirect or water cooling, Liquid cooling, Pressure sealed cooling, Evaporative cooling or steam cooling, components of water cooling system (thermostat, water pump, radiator, cooling fan etc), antifreeze solution, temperature gauges.	7	15%
SECOND INTERNAL EXAMINATION			
V	Fuel supply system in petrol engines: Types of fuel feed systems, fuel tank, fuel pumps and fuel filters (types and construction), air filter types and construction, combustion and ignition limits in SI engines, carburetion, properties of air-petrol mixtures, mixture requirements for steady state operation, transient mixture requirements, simple carburetor, different circuits in carburetor, type of carburetors like Solex, SU, Carter etc, MPFI engines, GDI engines, Brief about TSI, Flex Fuel Vehicles	7	20%
VI	Fuel supply system in diesel engines: Requirements of diesel injection system, Components of diesel injection system, Diesel filters, fuel feed pump, hand pump, heavy duty air filters, Diesel injection pump types - simple and multiple unit pump, C-AV Bosch pump, Modern distributor type pumps, CRDI, injection nozzles and types of injectors, governors (mechanical, pneumatic and hydraulic governors), cold starting devices, Quadra Jet and Multijet principles	7	20%
END SEMESTER EXAM

Course No.	Course Name	L-T-P-Credits	Year of Introduction
ME220	MANUFACTURING TECHNOLOGY	3-0-0-3	2016
Prerequisite: Nil			
Course Objectives:-			
<ol style="list-style-type: none"> To give an exposure to different techniques of casting and molds required. To provide an exposure to different rolling processes and different rolled products To familiarize with different forging methods, cautions to be adopted in die design. To give an introduction to various work and tool holding devices used in manufacturing. To introduce to the bending, shearing and drawing processes of sheet metal working and allied machines, To give an understanding of welding metallurgy and weldability and to introduce various metal joining techniques. 			
SYLLABUS			
Casting –patterns - Cores – Gating – Risering – Defects in Castings - Rolling –Defects in Rolled parts- forging – Coining – Heading – Piercing –Die Design- Extrusion Process– Extrusion Defects – Drawing Process -Principles of Location –Principles of Clamping – Types of Clamp -Sheet metal characteristics –Deep drawing –Spinning –Definition of Welding – Weldability – Solidification of Weld Metal – Heat Affected Zone – Welding Defects - Gas Welding -Arc Welding - Ultrasonic Welding – Friction Welding – Resistance Welding – Brazing- Soldering.			
Expected outcomes: At the end of the course the students will be able to			
<ol style="list-style-type: none"> Acquire knowledge in various casting processes and technology related to them. Understand the rolling passes required for getting required shapes of rolled products. Discuss important aspects of forging techniques Discuss sheet metal working processes and their applications to produce various shapes and products. Acquire knowledge in various types of welding processes.

Course Plan			
Module	Contents	Hours	Semester Examination Marks
I	Sand Casting – Sand Molds-Types of Molding Sands and Testing	1	15%
	Type of patterns - Pattern Materials	1	
	Cores –Types and applications –Sand Molding Machines	1	
	Gating System – Riserling	1	
	Shell Mold Casting – Ceramic Mold Casting	1	
	Investment Casting – Vacuum Casting – Slush Casting	1	
	Pressure Casting – Die Casting – Centrifugal Casting	1	
	Design Considerations based on Various Shapes - Defects in Castings – simple problems in casting	1	
II	Principles of Rolling –Types of rolling mills, Mechanics of Flat Rolling	1	15%
	Roll Force and Power Requirement - Neutral Point	1	
	Hot and Cold Rolling	1	
	Defects in Rolled Plates - Rolling Mills	1	
	Ring Rolling – Thread Rolling	1	
	Applications- Rolling of tubes, wheels, axles and I-beams	1	
FIRST INTERNAL EXAM			
III	Classification of forging – Forging methods – Forging under sticking condition	1	15%
	Precision Forging – Coining – Heading – Piercing	1	
	Die Design:- Preshaping, Design Features, Draft Angles – Die Materials and Lubrication	1	
	Forging Machines – Forging Defects and tests	1	
	Extrusion Process - Hot Extrusion – Cold Extrusion	1	
	Impact Extrusion – Extrusion Defects – Drawing Process, wire drawing process	1	

IV	Principles Location - Degrees of Freedom, 3-2-1 principle of locating	1	15%
	Locating from Planes - Locating from Circular Surfaces	1	
	Concentric Locating - Principles of Clamping	1	
	Types of Clamps - Strap Clamps Slide Clamps - Swing Clamps - Hinge Clamps	1	
	Vacuum Clamping - Magnetic Clamping	1	
SECOND INTERNAL EXAM			
V	Sheet metal characteristics – Typical shearing	1	20%
	Bending Sheet and Plate – Springback - Bending Force	1	
	Press Brake Forming - Tube Bending	1	
	Stretch Forming - Deep Drawing	1	
	Rubber forming - Spinning Shear Spinning - Tube Spinning	1	
	Definition of Welding - Weldability – Solidification of the Weld Metal	1	
	Heat Affected Zone – correlation of strength of welded joint with structure - Welding Defects	1	
VI	Gas Welding: – Flame Characteristics	1	20%
	Equipment, fluxes and filler rods	1	
	Arc Welding – Applications and Equipment	1	
	Electrodes	1	
	Shielded Metal Arc Welding – Submerged Arc Welding	1	
	GTAW – Plasma Arc Welding	1	
	Ultrasonic Welding – Friction Welding	1	
	Resistance Spot Welding	1	
	Resistance Seam Welding – Stud Welding – Percussion Welding - simple problems in welding	1	
	Brazing:- Filler Metals, Methods - Soldering:- Techniques, Types of Solders and Fluxes	1	
END SEMESTER EXAM			

Question Paper Pattern

Total marks: 100, Time: 3 hrs

The question paper should consist of three parts

Part A

4 questions uniformly covering modules I and II. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

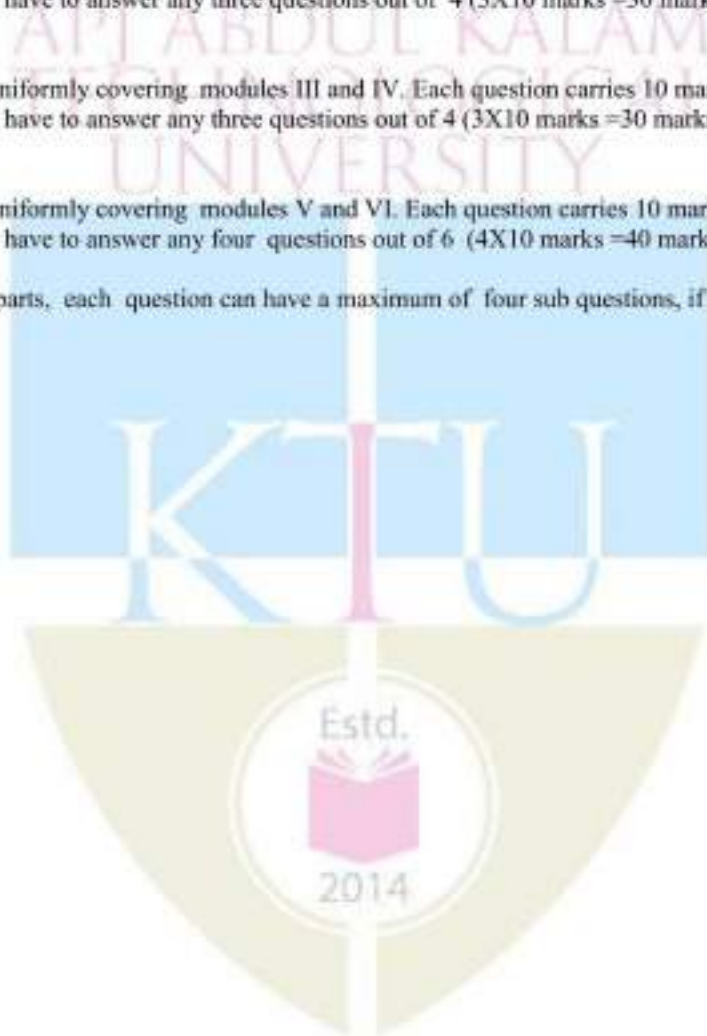

Part B

4 questions uniformly covering modules III and IV. Each question carries 10 marks
Students will have to answer any three questions out of 4 (3X10 marks =30 marks)

Part C

6 questions uniformly covering modules V and VI. Each question carries 10 marks
Students will have to answer any four questions out of 6 (4X10 marks =40 marks)

Note: In all parts, each question can have a maximum of four sub questions, if needed.

Course code	Course Name	L-T-P-Credits	Year of Introduction
HS210	LIFE SKILLS	2-0-2	2016
Prerequisite : Nil			
Course Objectives <ul style="list-style-type: none"> • To develop communication competence in prospective engineers. • To enable them to convey thoughts and ideas with clarity and focus. • To develop report writing skills. • To equip them to face interview & Group Discussion. • To inculcate critical thinking process. • To prepare them on problem solving skills. • To provide symbolic, verbal, and graphical interpretations of statements in a problem description. • To understand team dynamics & effectiveness. • To create an awareness on Engineering Ethics and Human Values. • To instill Moral and Social Values, Loyalty and also to learn to appreciate the rights of others. • To learn leadership qualities and practice them. 			
Syllabus Communication Skill: Introduction to Communication, The Process of Communication, Barriers to Communication, Listening Skills, Writing Skills, Technical Writing, Letter Writing, Job Application, Report Writing, Non-verbal Communication and Body Language, Interview Skills, Group Discussion, Presentation Skills, Technology-based Communication. Critical Thinking & Problem Solving: Creativity, Lateral thinking, Critical thinking, Multiple Intelligence, Problem Solving, Six thinking hats, Mind Mapping & Analytical Thinking. Teamwork: Groups, Teams, Group Vs Teams, Team formation process, Stages of Group, Group Dynamics, Managing Team Performance & Team Conflicts. Ethics, Moral & Professional Values: Human Values, Civic Rights, Engineering Ethics, Engineering as Social Experimentation, Environmental Ethics, Global Issues, Code of Ethics like ASME, ASCE, IEEE. Leadership Skills: Leadership, Levels of Leadership, Making of a leader, Types of leadership, Transactions Vs Transformational Leadership, VUCA Leaders, DART Leadership, Leadership Grid & leadership Formulation.			
Expected outcome The students will be able to <ul style="list-style-type: none"> • Communicate effectively. • Make effective presentations. • Write different types of reports. • Face interview & group discussion. • Critically think on a particular problem. • Solve problems. • Work in Group & Teams • Handle Engineering Ethics and Human Values. • Become an effective leader.

<p>II</p>	<p>Need for Creativity in the 21st century, Imagination, Intuition, Experience, Sources of Creativity, Lateral Thinking, Myths of creativity</p> <p>Critical thinking Vs Creative thinking, Functions of Left Brain & Right brain, Convergent & Divergent Thinking, Critical reading & Multiple Intelligence.</p> <p>Steps in problem solving, Problem Solving Techniques, Problem Solving through Six Thinking Hats, Mind Mapping, Forced Connections.</p> <p>Problem Solving strategies, Analytical Thinking and quantitative reasoning expressed in written form, Numeric, symbolic, and graphic reasoning, Solving application problems.</p>	<p>2</p> <p>2</p> <p>2</p>	<p>2</p> <p>2</p>
<p>III</p>	<p>Introduction to Groups and Teams, Team Composition, Managing Team Performance, Importance of Group, Stages of Group, Group Cycle, Group thinking, getting acquainted, Clarifying expectations.</p> <p>Group Problem Solving, Achieving Group Consensus.</p> <p>Group Dynamics techniques, Group vs Team, Team Dynamics, Teams for enhancing productivity, Building & Managing Successful Virtual Teams. Managing Team Performance & Managing Conflict in Teams.</p> <p>Working Together in Teams, Team Decision-Making, Team Culture & Power, Team Leader Development.</p>	<p>3</p> <p>2</p> <p>3</p>	<p>2</p> <p>2</p>
<p>IV</p>	<p>Morals, Values and Ethics, Integrity, Work Ethic, Service Learning, Civic Virtue, Respect for Others, Living Peacefully.</p> <p>Caring, Sharing, Honesty, Courage, Valuing Time, Cooperation, Commitment, Empathy, Self-Confidence, Character</p> <p>Spirituality, Senses of 'Engineering Ethics', variety of moral issues, Types of inquiry, moral dilemmas, moral autonomy, Kohlberg's theory, Gilligan's theory, Consensus and controversy, Models of Professional Roles, Theories about right action, Self-interest, customs and religion, application of ethical theories.</p> <p>Engineering as experimentation, engineers as responsible experimenters, Codes of ethics, Balanced outlook on.</p> <p>The challenger case study, Multinational corporations, Environmental ethics, computer ethics,</p>	<p>3</p> <p>2</p> <p>3</p> <p>3</p>	<p>2</p> <p>2</p>

	Weapons development, engineers as managers, consulting engineers, engineers as expert witnesses and advisors, moral leadership, sample code of Ethics like ASME, ASCE, IEEE, Institution of Engineers(India), Indian Institute of Materials Management, Institution of electronics and telecommunication engineers(IETE), India, etc.	3	
V	Introduction, a framework for considering leadership, entrepreneurial and moral leadership, vision, people selection and development, cultural dimensions of leadership, style, followers, crises.	4	2
	Growing as a leader, turnaround leadership, gaining control, trust, managing diverse stakeholders, crisis management		
	Implications of national culture and multicultural leadership Types of Leadership, Leadership Traits.	2	2
	Leadership Styles, VUCA Leadership, DART Leadership, Transactional vs Transformational Leaders, Leadership Grid, Effective Leaders, making of a Leader, Formulate Leadership		
END SEMESTER EXAM			

EVALUATION SCHEME

Internal Evaluation

(Conducted by the College)

Total Marks: 100

Part – A

(To be started after completion of Module 1 and to be completed by 30th working day of the semester)

1. Group Discussion – Create groups of about 10 students each and engage them on a GD on a suitable topic for about 20 minutes. Parameters to be used for evaluation is as follows;

- | | | | |
|-------|------------------------|---|----------|
| (i) | Communication Skills | – | 10 marks |
| (ii) | Subject Clarity | – | 10 marks |
| (iii) | Group Dynamics | – | 10 marks |
| (iv) | Behaviors & Mannerisms | – | 10 marks |

(Marks: 40)

Part – B

(To be started from 31st working day and to be completed before 60th working day of the semester)

2. Presentation Skills – Identify a suitable topic and ask the students to prepare a presentation (preferably a power point presentation) for about 10 minutes. Parameters to be used for evaluation is as follows;

- | | | | |
|-------|---------------------------|---|----------|
| (i) | Communication Skills* | - | 10 marks |
| (ii) | Platform Skills** | - | 10 marks |
| (iii) | Subject Clarity/Knowledge | - | 10 marks |

(Marks: 30)

* Language fluency, audibility, voice modulation, rate of speech, listening, summarizes key learnings etc.

** Postures/Gestures, Smiles/Expressions, Movements, usage of floor area etc.

Part – C

(To be conducted before the termination of semester)

3. Sample Letter writing or report writing following the guidelines and procedures. Parameters to be used for evaluation is as follows;

- | | | | |
|-------|----------------------------|---|----------|
| (i) | Usage of English & Grammar | - | 10 marks |
| (ii) | Following the format | - | 10 marks |
| (iii) | Content clarity | - | 10 marks |

(Marks: 30)

Total Marks: 50

Time: 2 hrs.

External Evaluation
(Conducted by the University)

Part – A

Short Answer questions

There will be one question from each area (five questions in total). Each question should be written in about maximum of 400 words. Parameters to be used for evaluation are as follows;

- (i) Content Clarity/Subject Knowledge
- (ii) Presentation style
- (iii) Organization of content

(Marks: 5 x 6 = 30)

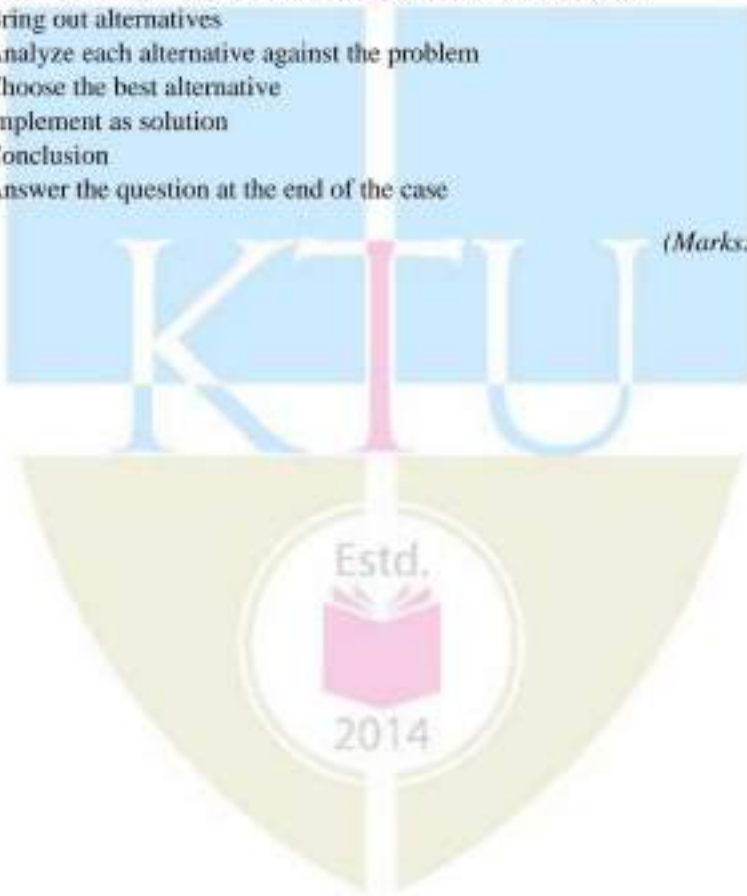

Part – B

Case Study

The students will be given a case study with questions at the end the students have to analyze the case and answer the question at the end. Parameters to be used for evaluation are as follows;

- (i) Analyze the case situation
- (ii) Key players/characters of the case
- (iii) Identification of the problem (both major & minor if exists)
- (iv) Bring out alternatives
- (v) Analyze each alternative against the problem
- (vi) Choose the best alternative
- (vii) Implement as solution
- (viii) Conclusion
- (ix) Answer the question at the end of the case

(Marks: 1 x 20 = 20)

Course code.	Course Name	L-T-P - Credits	Year of Introduction
ME236	Machine shop	0-0-3-1	2016
Prerequisite: ME220 Manufacturing Technology			
Course Objectives			
<ul style="list-style-type: none"> • To acquaint with the basic operations of lathe, shaping, slotting, grinding and milling machines. • To conduct the exercise involving plane turning, groove cutting, taper turning, facing, thread cutting, gear cutting and grinding operations. 			
List of exercises			
<ol style="list-style-type: none"> 1. Demonstration of construction and operations of general purpose machines :- lathe, drilling machine, milling machine, shaper, planing machine, slotting machine, cylindrical grinder, surface grinder, and tool and cutter grinder. 2. Plane turning and Step turning on lathe. 3. Groove turning (cup and ball) and taper turning on lathe. 4. Thread cutting and knurling operations on lathe. 5. Exercise on machining flat surfaces, grooving keyways using shaping machines. 6. Machining of V –block using shaper machines. 7. Machining grooves and key slots using slotting machine. 8. Experiment on drilling machines –drilling and boring operations. 9. Reaming, counter sinking and tapping operations using drilling machines. 10. Experiment on milling machine – Plane milling, keyway cutting, and cutting of splines. 11. Experiment on vertical milling. 12. Cutting of spur gear on milling machine. 13. Grinding of plane surface using surface grinding machine. 14. Cylindrical grinding using cylindrical grinding machine. 			
Expected outcome.			
The students will be able to			
<ol style="list-style-type: none"> i. operate different machine tools using proper work holders ii. produce different part features to the desired quality. 			
Text Books:			
<ol style="list-style-type: none"> 1. R.K. Jain, Production Technology, Khanna Publishers. 2. HMT, Production Technology, Tata McGraw Hill. 3. Chapman, Workshop Technology Vol II, ELBS. 4. S.K. Hajra Choudhury, Workshop Technology Vol II, Media Promoters & Publishers. 			

Course code	Course Name	L-T-P - Credits	Year of Introduction
AU234	VEHICLE SYSTEMS LAB	0-0-3-1	2016
Prerequisite : Nil			
Course Objectives <ul style="list-style-type: none"> To study about hand tools, special purpose tools, and their uses. To familiarize with various systems and components of an automobile. To know about writing technical specifications and description of all types of chassis and transmission components of automobiles, including body and interiors 			
List of Exercises/Experiments (Minimum 12 exercises/experiments are mandatory) <ol style="list-style-type: none"> 1. Servicing of clutch assembly, checking the spring tension of coil springs in spring tester. 2. Dismantling of gear box, inspecting components, servicing, checking the gear ratios. 3. Dismantling of differential assembly, servicing, backlash adjustments, check for drive axis ratio. 4. Servicing of A. C. mechanical fuel pump and testing the pump. 5. Servicing of Carburetor, Study Various Circuits on it, tuning of carburetor. 6. Servicing master and wheel cylinders in hydraulic brake system & bleeding of brakes. 7. Valve timing setting including valve clearance adjustment. 8. Servicing of steering gear box, checking for end play in shafts. 9. Overhauling of a complete strut type suspension system. 10. Dismantle and assemble C.V joint. Also examine a slip joint, U.J cross in propeller shaft. 11. Compression test of petrol and diesel engine. 12. Disassembling cylinder head, decarbonizing, Valve Seat Grinding 13. Disassembling of engine: inspection of engine components, servicing of components, measurement of dimensions of different components of engine, compare with standard specifications, piston ring setting, assembling using special tools. 14. Rectifying the troubles in ignition system, adjusting spark plug and C. B. Point gap, checking ignition timing. 15. Cylinder reconditioning: Checking the cylinder bore, setting the tool, re-boring operation using vertical or portable cylinder reborer machine. 16. Tyre removing, inspection, check for cuts, bulges and excessive tread wear, resetting using pneumatic tyre changer & Wheel balancing: Balancing of wheels by computerized wheel balancing machine. 17. Wheel alignment: Checking the camber, caster, king pin inclination, toe in and toe out with computerized wheel alignment machine. 18. F. I. P Calibration and phasing: Setting the angle of fuel delivery, calibration of fuel quantity by FIP calibrating machine. 19. Brake drum re-conditioning: Brake drum skimming after leveling machine, ovality measurement and setting the tool. 20. Testing of Two wheeled vehicles on chassis dynamometer 			
Expected outcome. After this course the student will be able to <ol style="list-style-type: none"> handle any maintenance issue in a vehicle identify the troubles of the vehicles from the symptoms shown. 			
Text Book: <ol style="list-style-type: none"> 1. Boyce Duggins – Automobile Repair guide, Theodor Audel and Co., Indiana – 1978. 2. A. W. Judge – Maintenance of high speed diesel engine, Chapman Hall Ltd. 3. A. W. Judge – Motor vehicle engine servicing 3rd edition, Pitman paper mark, London, 1969. 4. Vehicle service manuals and reputed manufacturers.
