| Course Code | Course Name | L-T-P-Credits | Year of Introduction |
|-------------|------------------------------------|---------------|-------------------------|
| CE301 | DESIGN OF CONCRETE STRUCTURES I | 3-1-0-4 | 2016 |

Pre-requisites: CE202 Structural Analysis I

Course objectives:

- To provide the students with the knowledge of the behavior of reinforced concrete structural elements in flexure, shear, compression and torsion
- To enable them to design essential elements such as beams, columns, slabs staircases and footings under various loads.

Syllabus:

Introduction- Limit State method of design- Analysis of singly reinforced rectangular beams- shear strength of RC beam-design of shear reinforcement-bond and development length- curtailment of reinforcement-design of singly reinforced beams-analysis and design of doubly reinforced beams – simply supported , cantilever- analysis of singly reinforced T-beams -design for torsion-design of one-way slab- cantilever slab- continuous slab (detailing only)- two way slabs- design using code coefficients- Limit State of Serviceability-deflection-cracking -Stair cases- design & detailing-Columns-effective length-design of axially loaded short columns with rectangular ties and helical reinforcement.

Expected Outcomes:

The students will be able to

- i. Apply the fundamental concepts of limit state method
- ii. Use IS code of practice for the design of concrete elements
- iii. Understand the structural behavior of reinforced concrete elements in bending, shear, compression and torsion.
- iv. Design beams, slab, stairs, columns and draw the reinforcement details.
- v. Analyze and design for deflection and crack control of reinforced concrete members.

| CE305 | GEOTECHNICAL ENGINEERING - II | 3-0-0-3 | 2016 |

Pre-requisite CE208 Geotechnical Engineering - I

Course objectives:

- To impart to the students, in-depth knowledge about the basic concepts and theories of foundation engineering;
- To enable the students to acquire proper knowledge about various methods of foundation analysis for different practical situations.

Syllabus:

Stresses in subsoil due to loaded areas of various shapes, Boussinesq's formula, Newmark's chart, Lateral earth pressure, Rankine's and Coulomb' theories, Influence of surcharge, inclined backfill, water table and layering, Terzaghi's bearing capacity theory for isolated footings, Local and general shear failure, Total and differential settlements, soil improvement techniques, combined footings, raft foundations, well foundation, Problems encountered in well sinking, Pile foundations, Bearing capacity of single pile static and dynamic formulae, Capacity of Pile groups, Machine foundation, Methods of vibration isolation, site investigation, Guidelines for choosing spacing and depth of borings, boring methods, Standard Penetration Test.

Expected Outcomes:

The students will be able to understand

- i. the basic concepts, theories and methods of analysis in foundation engineering;
- ii. the field problems related to geotechnical engineering and to take appropriate engineering decisions.

|--------|-----------------------------|---------|--------------|
| Code | | Credits | Introduction |
| CE309 | WATER RESOURCES ENGINEERING | 3-0-0-3 | 2016 |

Pre-requisite : NIL

Course objectives

- To impart knowledge regarding the availability of water on hydrosphere, its distribution and quantification
- To convey the knowledge on the scientific methods for computing irrigation water requirements
- To communicate fundamental knowledge on reservoir engineering and river engineering

Syllabus

Hydrologic cycle, Precipitation, Infiltration and Evaporation-measurement and data analysis. Runoff-components and computation, Hydrograph, Unit Hydrograph and S-Hydrograph. Irrigation types and methods-Soil water plant relationships, Frequency of irrigation, Computation of crop water requirement. Stream flow measurement -Stage-discharge curve. Meandering of rivers, river training works. Surface water systems: diversion and storage systems, reservoir - estimation of storage capacity and yield of reservoirs - reservoir sedimentation -useful life of reservoir. Groundwater - Aquifer types and properties - Steady radial flow into a well. Estimation of yield of an open well.

Expected Outcome

After successful completion of this course, the students will be able to :

- i. Describe the hydrologic cycle and estimate the different components
- ii. Determine crop water requirements for design of irrigation systems
- iii. Compute the yield of aquifers and wells.
- iv. Know the features of various river training works
- v. Estimate the storage capacity of reservoirs and their useful life.

| Module | Contents | Hours | Sem. Exam Marks % |
|-----------|--|-------|----------------------------|
| I | Hydrologic cycle-precipitation-mechanism, types and forms. Measurement of rainfall using rain gauges-optimum number of rain gauges. Estimation of missing precipitation. Representation of rainfall data-mass curve and hyetograph. Computation of mean precipitation over a catchment. Design rainfall - probable maximum rainfall. Infiltration-measurement by double ring infiltrometer. Horton's model. Evaporation-measurement by IMD land pan, control of evaporation. | 8 | 15 |
| п | Runoff-components of runoff-methods of estimation of runoff- infiltration indices, Hydrograph analysis-Hydrograph from isolated storm-Base flow separation. Unit hydrograph –uses. Assumptions and limitations of unit hydrograph theory. Computation of storm/flood hydrograph of different duration by method of superposition and by development of S– Hydrograph. | 8 | 15 |
| | FIRST INTERNAL EXAMINATION | | |
| III IV | Irrigation– Necessity, Benefits and ill effects. Types: flow and lift irrigation - perennial and inundation irrigation. Methods: flooding, furrow, sprinkler and drip irrigation (concepts only, no design aspects/problems), Soil water plant relationships, soil moisture constants, Computation of crop water requirement: depth and frequency of Irrigation, Duty and delta, relationship, variation of duty, factors. Computation of design discharge of conveyance channels, Irrigation efficiencies. Consumptive use of water: concept of Evapotranspiration. (No detailed discussion on estimation procedures) Stream flow measurement: methods, Estimation of stream flow by area velocity method only, Stage discharge curve. Meandering of rivers, River training – objectives and classification, description of | 6 | 15 |
| | river training works. | | |
| | SECOND INTERNAL EXAMINATION | | |
| V | Surface Water system: diversion and storage systems, necessity. River flow: Flow duration Curve, Firm yield. Reservoirs-types of reservoirs, zones of storage reservoir, reservoir planning-storage capacity and yield of reservoirs-analytical method and mass curve method. Reservoir sedimentation: trap efficiency, methods for control. Computation of useful life of reservoir. | 7 | 20 |
| VI | Ground water : vertical distribution of groundwater, classification of saturated formation, water table, Aquifer properties : Porosity, Specific yield, specific retention, Types of aquifers. Darcy's law, co-efficient of permeability, Transmissibility. Wells- Steady radial flow into a fully penetrating well in Confined and Unconfined aquifers. Estimation of yield of an open well, pumping and recuperation tests. Tube wells – types. | 7 | 20 |

| CE331 | MATERIAL TESTING LAB -II | 0-0-3-1 | 2016 |

Pre-requisite: CE204 Construction Technology

Course objectives:

- To enable experimental evaluation of properties of the materials used for concrete
- To obtain the characteristics of the materials.

List of Experiments:

- 1. Determination of the Specific Gravity and Soundness of cement
- 2. Determination of the Standard Consistency, Initial and Final Setting Times of Cement and the compressive strength of Cement.
- 3. Tests on fine aggregate specific gravity, bulking, sieve analysis, fineness modules, moisture content, bulk density
- 4. Tests on coarse aggregate specific gravity, sieve analysis, fineness modulus, bulk density.
- 5. Tests on Fresh Concrete: Workability : Slump, Vee-Bee, Compaction factor tests ,flow test
- 6. Determination of the Compressive Strength of Concrete by Cube and Cylinder.
- 7. Carrying out the Split Tensile and Flexural strength of Concrete.
- 8. Compressive strength of Brick as per IS
- 9. Transverse strength of tiles
- 10. Demonstration of Mix Design of Concrete by IS methods
- **11.** Non destructive tests (rebound hammer & ultrasonic pulse velocity)

Books/Manuals /References:-

|-------------|------------------------------|-------------------|-------------------------|
| CE333 | GEOTECHNICAL ENGINEERING LAB | 0-0-3-1 | 2016 |

Pre-requisite : CE208 Geotechnical Engineering - I

Course objectives:

• To understand the laboratory tests used for determination of physical, index and Engineering properties of soil.

List of Experiments:

- 1. Determination of Water Content, Specific Gravity and Shrinkage Limit
- 2. Field Density determination and Sieve Analysis
- 3. Atterberg Limits (Liquid Limit and Plastic Limit)
- 4. Hydrometer Analysis
- 5. Direct Shear test
- 6. Standard Proctor Compaction Test
- 7. Permeability Test and Unconfined Compression Test
- 8. Consolidation Test
- 9. Swelling Test
- 10. Heavy compaction
- 11. California Bearing Ratio Test.

Expected Outcomes:

The students will

- i. have thorough knowledge about the procedures of laboratory tests used for determination of physical, index and engineering properties of soils
- ii. have the capability to classify soils based on test results and interpret engineering behavior based on test results
- iii. be able to evaluate the permeability and shear strength of soils
- iv. be able to evaluate settlement characteristics of soils
- v. be able to evaluate compaction characteristics required for field application

| CE361 | ADVANCED CONCRETE TECHNOLOGY | 3-0-0-3 | 2016 |

Prerequisite: CE204 Construction Technology,

Course objectives:

- To understand the behaviour of fresh and hardened concrete.
- To make aware the recent developments in concrete technology
- To understand factors affecting the strength, workability and durability of concrete
- To impart the methods of proportioning of concrete mixtures

Syllabus:

Review of Materials for concrete making. chemical and physical processes of hydration, Properties of fresh concrete - Mineral admixtures - Chemical Admixtures - Proportioning of concrete mixtures. Properties of hardened concrete- Durability of concrete, Non-destructive testing of concrete – special concretes

Expected Outcomes:

The students will be able to:

- i. Understand the testing of concrete materials as per IS code
- ii. Know the procedure to determine the properties of fresh and hardened of concrete
- iii. Design the concrete mix using ACI and IS code methods
- iv. Select and Design special concretes depending on their specific applications
- v. Gain ideas on non-destructive testing of concrete

Text books:

- 1. Neville A.M., "Properties of Concrete", Trans-Atlantic Publications, Inc.; 5e, 2012
- 2. Job Thomas., "Concrete Technology", Cenage learning,
- 3. R. Santhakumar, , Concrete Technology", Oxford Universities Press, 2006
- 4. Shetty M. S., Concrete Technology", S. Chand & Co., 2006

- 4. Bungey, Millard, Grantham Testing of Concrete in Structures- Taylor and Francis, 2006

| Module | Contents | Hours | Sem. Exam Marks % |
|--------|---|-------|----------------------------|
| Ι | Aggregates: Review of types; sampling and testing; effects on properties of concrete, production of artificial aggregates.Cements: Review of types of cements, chemical composition; properties and tests, chemical and physical process of hydration, | 6 | 15 |

| | .Blended cements. | | |
|-----|---|---|----|
| II | Properties of fresh concrete - basics regarding fresh concrete - mixing, workability, placement, consolidation, and curing, segregation and bleeding Chemical Admixtures: types and classification; actions and | 7 | 15 |
| | interactions; usage; effects on properties of concrete. | | |
| | FIRST INTERNAL EXAMINATION | | |
| III | Mineral Admixtures: Flyash, ground granulated blast furnace slag, metakaolin, rice-husk ash and silica fume; chemical composition; physical characteristics; effects on properties of concrete; advantages and disadvantages. Proportioning of concrete mixtures: Factors considered in the design of mix . BIS Method, ACI method. | 6 | 15 |
| IV | Properties of hardened concrete : Strength- compressive tensile and flexure - Elastic properties - Modulus of elasticity - Creep- factors affecting creep, effect of creep - shrinkage- factors affecting shrinkage, plastic shrinkage, drying shrinkage, autogeneous shrinkage, carbonation shrinkage | 6 | 15 |
| | SECOND INTERNAL EXAMINATION | | |
| V | Durability of concrete: Durability concept; factors affecting, reinforcement corrosion; fire resistance; frost damage; sulfate attack; alkali silica reaction; concrete in sea water, statistical quality control, acceptance criteria as per BIS code. Non-destructive testing of concrete: Surface Hardness, Ultrasonic, Penetration resistance, Pull-out test, chemical testing for chloride and carbonation- core cutting - measuring reinforcement cover. | 9 | 20 |
| VI | Special concretes - Lightweight concrete- description of varioustypes -High strength concrete - Self compacting concrete -Rollercompacted concrete - Ready mixed concrete - Fibre reinforcedconcrete - polymer concreteSpecial processes and technology for particular types ofstructure - Sprayed concrete; underwater concrete, mass concrete;slip form construction, Prefabrication technology | 8 | 20 |

QUESTION PAPER PATTERN (End semester exam)

Maximum Marks :100

Exam Duration: 3 Hrs

Part A -Module I & II : 2 questions out of 3 questions carrying 15 marks each

Part B - Module III & IV: 2 questions out of 3 questions carrying 15 marks each

Part C - Module V & VI: 2 questions out of 3 questions carrying 20 marks each

Note : 1.Each part should have at least one question from each module

| Course Code | Course Name | L-T-P- Credits | Year of Introduction | | |

| CE363 | GEOTECHNICAL INVESTIGATION | 3-0-0-3 | 2016 | | |
| Pre-requisite : CE208 Geotechnical Engineering - I | | | | | |
| Course objectives: | | | | | |
| • To impart to the students, a clear idea about how a geotechnical investigation programme is to be planned and executed; | | | | | |

• To impart in-depth knowledge about the various methods of geotechnical investigation and the field tests to be conducted in different situations.

Syllabus:

Objectives of soil exploration – Planning of a sub-surface exploration programme –Methods of exploration - Sounding methods – Standard Penetration Test - Cone Penetration Tests - Plate load test – Pressure meter test - Geophysical methods —pile load tests -Factors affecting sample disturbance and methods to minimise them –Types of samplers and Core retainers –Rock Quality Designation–Sub-soil investigation report

Expected Outcomes:

- i. The students will be able to understand the procedure, applicability and limitations of various methods of geotechnical investigation;
- ii. Ability of the students in making proper engineering judgments and in taking appropriate decisions related to geotechnical investigations will be significantly improved.

Text Books:

- 1. Gopal Ranjan and Rao A.S.R., "Basic and Applied Soil Mechanics", New Age International (P) Limited, New Delhi, 2002.
- 2. Venkataramaiah, "Geotechnical Engineering", Universities Press (India) Limited, Hyderabad, 2000.

| | COURSE PLAN | | | | |
|--------|--|-------|----------------------------|--|--|
| Module | Contents | Hours | Sem. Exam Marks % | | |
| Ι | Introduction and practical importance - Objectives of soil exploration – Planning of a sub-surface exploration programme –Collection of existing information, reconnaissance, preliminary and detailed investigation - I.S. and other guidelines for deciding the number, size, spacing and depth of boreholes | 7 | 15 | | |

| | END SEMESTER EXAMINATION | | |
|-----|---|---|----|
| VI | Rock Quality Designation –Bore log – Soil profile – Sub-soil investigation report Static pile load test – procedure for estimation of safe load - Cyclic pile load test –Procedure for separation of end bearing and skin friction resistance- solution of numerical problems using static and cyclic pile load test data | 7 | 20 |
| V | Second Internal EXAMINATION Soil sampling – Undisturbed, disturbed, and representative samples – Chunk and tube samples – Factors affecting sample disturbance and methods to minimise them –Area ratio - Inside clearance - Outside clearance - Recovery ratio –Ball check valve – Handling and transportation of samples – Extrusion of samples Types of samplers – Thin walled sampler – Piston sampler – Split spoon sampler – Methods for collection of sand samples from beneath the water table - Core retainers | 8 | 20 |
| | | | |
| IV | Geophysical methods – Seismic refraction method – Procedure, uses, limitations – Solution of numerical problems to estimate the velocity of seismic waves and the thickness of upper layer of a two-layered soil system - Electrical resistivity method – Electrical profiling and electrical sounding – Procedure, uses, limitations Pressure meter test - Procedure –Uses - limitations | 6 | 15 |
| III | Sounding methods Standard Penetration Test – Procedure – corrections to be applied to observed N values – Procedure for estimation of representative average N value – Numerical examples - Factors influencing the SPT results and precautions to obtain reliable results – Merits/drawbacks of the test – Correlations of N value with various engineering and index properties of soils Static Cone Penetration Test – Procedure – Merits/drawbacks – Correlation of static CPT results with soil properties -Dynamic Cone Penetration Test – Procedure – Merits/drawbacks – Critical comparison of SPT, static CPT and dynamic CPT | 8 | 15 |
| | FIRST INTERNAL EXAMINATION | | |
| Π | Plate load test – Procedure, uses and limitations – modulus of subgrade reaction- Solution of numerical problems using plate load test data | 6 | 15 |
| | Methods of exploration - Open pits – Auger boringWash boring, percussion drilling, rotary drilling – Comparison of the methods of exploration- Stabilization of bore holes | | |

QUESTION PAPER PATTERN (End semester examination)

Maximum Marks :100

Exam Duration: 3 Hrs

|--------|--------------------------------|---------|--------------|
| Code | | Credits | Introduction |
| CE365 | FUNCTIONAL DESIGN OF BUILDINGS | 3-0-0-3 | 2016 |

Prerequisite : CE204 Construction Technology

Course objectives:

- To understand the acoustical design concepts and noise control techniques
- To impart the fundamental concepts of natural and artificial lighting designs
- To provide principles of climatic conscious design of buildings with special emphasis on tropical climates.
- To understand the apparent position of sun with respect to earth during different periods of the year and apply it in computation of solar radiation and design of shading devices.

Syllabus:

Acoustics : Physics of sound- Behavior of sound- Sound insulation and reverberation control Lighting: Principles- Day lighting and artificial lighting – design methods

Thermal design of buildings: Climatic elements – classification- thermal comfort and indices-solar radiation calculations and design of shading devices.

Thermo physical properties of building materials and thermal control- passive and active building design- Steady and periodic heat flow through building envelope. Concept of green building.

Expected Outcomes:

On completion of the course, the students will be able to:

- i. Analyze and make effective decisions in use of principles of functional planning of the buildings with respect to Acoustics and Lighting and Thermal design of buildings in various climatic zones that the student may encounter in his/her professional career.
- ii. Select different building materials and explain the manner in which they can be used in different types of buildings with respect to various functional requirements like acoustics, lighting and thermal comfort.
- iii. Apply the techniques learned to the estimate solar radiation falling on different surfaces of the buildings, design shading devices to protect from direct sunlight, design of energy efficient, functionally comfortable buildings, low energy buildings and green buildings.

| Module | Contents | Hours | Sem. Exam Marks % | |
| Ι | Acoustics, fundamentals: Physics of sound-Frequency, period amplitude. Intensity of sound- Watts/m ² - Bel- Decibel scales- dBA-Phon. Addition of sound levels. Human Audibility range. Behavior of sound in free and reverberant fields. Noise- allowable limits-effect of noise on human-Air and structure born noises-equivalent noise levels-day and night equivalent. | 7 | 15 | |
| Π | Acoustics, applications: Measures of noise control- Source-path and receiving end. TL value and computation of TL value, Flanking paths. Sound absorption-materials and fixings. Reverberation-Sabines formula-Eyrings modification. Acoustical defects- acoustical design of auditoriums and small lecture halls. Acoustical considerations of offices, hospitals and Industrial buildings. | 7 | 15 | |
| | FIRST INTERNAL EXAMINATION | | | |
| III | Lighting, Natural: Visual tasks – Natural lighting- illumination requirements for various buildings –principles of day lighting – day light factor and its components- Design of side-lit windows-BIS and CBRI methods-skylights | 6 | 15 | |
| IV | Lighting, Artificial : Artificial lighting- illumination requirements- lux meter – lamps and luminaries – polar distribution curves– Colour temperature and colour rendering index- glare -Design of artificial lighting – lumen method – point by point method. Basic idea of street lighting and outside lighting | 6 | 15 | |
| | SECOND INTERNAL EXAMINATION | | | |
| V | Thermal comfort: Factors affecting thermal comfort Effective temperature –Thermal comfort indices-ET-CET Charts- Bioclimatic chart- Psychrometry and Psycrometric chart. Earth-Sun relationship : Sun's apparent movement with respect to the earth. Solar angles-Computation of solar radiation on different surfaces-solar path diagram-shadow-throw concept and design of shading devices | 8 | 20 | |
| VI | Heat flow through building envelope: Thermo physical properties of building materials: Thermal quantities – heat flow – thermal conductivity – resistance and transmittance and surface coefficient - Sol- air temperature concept- solar gain factor. Thermal transmittance of structural elements – thermal gradients – heat gain/loss calculation. Periodic heat flow – time lag and decrement factor. Design approaches: Climate conscious designs- Climatic zones in India- orientation and shape of buildings in different climatic zones-Passive solar-Active solar and Active approaches. Requirements of buildings in tropical areas-Thermal insulation-Introduction to the concept of green-building | 8 | 20 | |
| | END SEMESTER EXAMINATION | | | |

| Ι | Fundamental concepts of hazards and disasters: Relationship between disasters and development, implications. Introduction to key concepts and terminology of hazard, vulnerability, exposure, risk, crisis, emergencies, Disasters, Resilience. | 7 | 15 | |
|-----------------------------|--|---|----|--|
| II | Types of Natural Disasters I- Earth quakes, Landslides. Classification and nature of impacts. | 7 | 15 | |
| | FIRST INTERNAL EXAMINATION | | | |
| III | Types of Natural Disasters II- Floods, Coastal disasters- Cyclones, Tsunamis. Classification and nature of impacts. | 7 | 15 | |
| IV | Types of Anthropogenic Disasters I– soil and soil degradation, desertification. | 7 | 15 | |
| SECOND INTERNAL EXAMINATION | | | | |
| V | Types of Anthropogenic Disasters II-Fundamental concepts of water and atmospheric pollution. | 7 | 20 | |
| VI | Hazard and disaster management plans for floods, cyclones, tidal waves. | 7 | 20 | |

QUESTION PAPER PATTERN (End semester examination)

Maximum Marks :100

Exam Duration: 3 Hrs

Part A -Module I & II : 2 questions out of 3 questions carrying 15 marks each

Part B - Module III & IV: 2 questions out of 3 questions carrying 15 marks each

Part C - Module V & VI: 2 questions out of 3 questions carrying 20 marks each

Note : 1.Each part should have at least one question from each module

| Course Code | Course Name | L-T-P- Credits | Year of Introduction |

| COURSE PLAN | | | | |
| Module | Contents | | Hours | Sem. Exam Marks % |
| I | Stress, Principal stresses, Strain energy: Stress arbitrarily oriented plane-stress transformations- stresses & strains (2d & 3d)- Generalized Ho- hermo-elasticity for isotropic materials-strain concentration. | strain theory-principal oke's law-Equations of | 6 | 15 |

| II | Failure & Failure criteria: Modes of failure –yield failure criteria- introduction to fracture mechanics-cracks & brittle fracture-fatigue-elastic and inelastic buckling. | 6 | 15 |
|-----------------------------|---|---|----|
| | FIRST INTERNAL EXAMINATION | | |
| ш | Elements of theory of elasticity : Transformation of stress and strains: Plane state of stress - equations of transformation - principal stresses. Plane state of strain – analogy between stress and strain transformation - Mohr's circles of stress and strain – strain rosettes. | 6 | 15 |
| IV | Displacements-strains and compatibility-equilibrium equations and boundary conditions- stress field solutions for plane stress problems- polynomial solutions in Cartesian coordinates-displacements calculated from stresses-plane stress problems in polar coordinates. | 6 | 15 |
| SECOND INTERNAL EXAMINATION | | | |
| V | Beams on elastic foundation: General theory-infinite beam subjected to concentrated load- beams with uniformly distributed loads- short beams Curved Beams: Winkler Bach formula-Equivalent area method-Circumferential stresses in Curved beams with I and T sections- Closed ring with circumferential load and uniform loads -deflections of sharply curved beams. | 9 | 20 |
| VI | Torsion : Torsion of a cylindrical bar of circular cross section- St. Venant's semi inverse method-stress function approach-elliptical, equilateral triangle & narrow rectangular cross sections - Prandtl's membrane analogy-Hollow thin wall torsion members-multiply connected cross sections- thin wall torsion members with restrained ends. | 9 | 20 |
| END SEMESTER EXAMINATION | | | |
