

STATEMENT OF PURPOSE

Dear Admissions Committee,

I am Jerone Rimy of 17 years old from India. I am happy to have successfully completed my education at Indian School Al Ain in The United Arab Emirates and I am now looking to continue my studies further and explore new opportunities at your university in the field of computer science.

In my high school years, I developed a keen interest in the subject of computer science. I was always fascinated by computers and computer technologies at a very early age, picking up computer science in school helped me to learn and understand more about the field of computer science and how broad of a field it is. The interest and ever growing understanding and knowledge I have in computer science, helped me to take part in various projects and competitions and also help teach my friends who were struggling with the subject. In my final year, I was able to secure the highest mark in my class.

I chose KdG University because of its emphasis on real world problems, high quality education, up to date curriculum and also the opportunity it provides for students after graduation. And also the opportunity to study in Antwerp presents for me a chance for my academic growth, personal development and as well as for gaining insightful knowledge of computer science trends and practices around the world.

As I start this next chapter in my academic journey I would be happy to be a part of the KdG's academic community and to take use of the resources and facilities offered to develop my knowledge and understanding of computer science. I'm sure that KdG's modern curriculum and focus on hands on learning will help me reach my potential and contribute significantly to the field.

Thank you for considering my application. I look forward to the opportunity to learn and grow at KdG University.

Sincerely,

Jerone
