

## STATEMENT OF PURPOSE

My name is Raj Donda, born on 13<sup>th</sup> September, 1999 at Dedkadi which is a Village in in Bhavnagar District of Gujarat state in India. I am currently living in a city called with different names such as Diamond City and Silk City, which is Surat. I live with my family including my parents, grandparents and I have an elder sister but she is married. My father, Mr. Ashokbhai Donda is a farmer and my mother, Mrs. Prabhaben Donda is a housewife. My sister, Kajal Ravibhai Savaliya is a housewife.

I really think that having a solid education is essential for a successful profession. I really believe that achieving a practical and pragmatic job is challenging without the simplicity, honesty, and evident hard effort that my parents instilled in me when I was a child. My family encouraged me to finish my degree overseas and promised to provide me with financial support. My family has encouraged and supported me to succeed in my academic endeavours in the same way. That's why my family and I chose to finish our education in Germany, a decent country around the globe for education.

If I talk about my education qualification, I have completed my Secondary Education with 76% in March 2015 and Higher Secondary with 68% in March 2017 from Gujarat Secondary and Higher Secondary Education Board. With the completion of my schooling education, I decided to pursue my bachelor's in science specializing in Microbiology, where I secured 6.45 CGPA which is 64.5% from Veer Narmad South Gujarat University in September 2020.

Further, in order to gain practical exposure, I started working as a lab technician and phlebotomist in Valam Pathology Laboratory from the time period 10/12/2020 – till date. This working period made me realize the amount of hard work and efforts it takes to apply theoretical knowledge into the practical work life. Throughout every experience of my work life, I explored different areas of my domain by working with people and completing tasks. As a lab technician and phlebotomist, I assist scientists in laboratories. This often involves work with complex systems to help the functioning of scientific processes and projects, to record the results appropriately, and to aid in the routine procedures that take place in a laboratory.

Moreover, as a requirement to study in Germany, I appeared for PTE on 2<sup>nd</sup> June 2023 in which I obtained Overall 63.

As a part of my Master's education, I have decided to study from the course M.Sc. in International Health Management. My proposed course of education focuses on the study and application of Health Management, the first three academic terms revolve on key topics such as Management of Health Organisations, Decision Making, Planning and Leadership, Socioeconomic Research in Health Services, Financial and Economic Management of Health Organisations and more. Graduates of a M.Sc. in health management program may find employment in a variety of industries, including Research Analyst, Medical Data Reviewer, Medical Writer, Senior Manager, - Health & Medical Affairs Professional.

This program involves detailed learning of Human Resources Management and Health Organisations, Information Technology in Health Systems, Decision Making, Planning and

Leadership, Anthropology and Sociology of Health and Medical Care, Ethical, Cultural and Behavioural Aspects of Health, Management of Health Organisations. Upon completion, I will gain the ability to identify, describe and critically analyse the major issues in management, planning and policy in the health-related sectors, additionally, explain the context, challenges and opportunities involved in the formulation and implementation of health policy within an international health system.

After rigorous research in selecting the ideal country for my higher education, I have selected to study from Germany. I have selected to study from this country instead of my native India because of several compelling reasons. Firstly, the quality of education; the government in Germany provides great quality of education and is globally renowned. They develop their education system by bringing improvements in their universities and research institutions ensuring the best quality education to their international students. Nonetheless, universities in Germany strengthen research opportunities for innovation because the government places a great emphasis on research, with the assistance of several top-ranked universities known for research excellence.

Apart from this, Universities in Germany provide comprehensive support to their students to ensure that international students are well-supported throughout their studies, including career development services and English language support. Additionally, the curriculum is built in such a way that fulfills each and every requirement of the recent market and provide the students with abilities and knowledge to achieve in their chosen professional pathway. Germany is known for its open and cosmopolitan environment, and international students feel safe in the country. The Germany government has rigorous laws in place to safeguard the safety and well-being of international students

My selected university - Berlin School of Business and Innovation was Founded in 2014. BSBI is located in the heart of Berlin. The campuses of BSBI are located in Berlin, Hamburg, Athens, and Paris. The main campus of BSBI Berlin is located in the historical building of Alte Post. Berlin School of Business and Innovation sets the bar for academic achievement and provides students with a variety of aid choices.

Berlin School of Business and Innovation has a good track record for placements. Cultural diversity affords me the opportunity to interact with people from other backgrounds, which improves my understanding of the world. The university provides a wide range of academic and workforce development courses in addition to full-time, part-time, open, degree, diploma, graduation, post-graduate, accelerated, continuous, trade, and apprenticeship program. The college offers excellent lab and research facilities in addition to a wide range of other excellent resources to help students succeed in their extracurricular and academic endeavors.

Berlin School of Business and Innovation additionally provides technologically enhanced online education to assist students in preparing for success in a rapidly evolving digital economy. Its main objective is to aid pupils in achieving their academic success objectives. The university not only offers a variety of services, but also places a strong emphasis on training soft skills. Students have access to counseling, housing assistance, and extra tutoring. On-campus activities that encourage physical activity include trips to the gym, indoor track, multipurpose rooms, and the health and wellness office. International students can express their adaptation-related experiences during the Assistance Sessions, get support, and pick up coping mechanisms for culture shock.

India is a developing country with a wide variety of excellent potential employment opportunities; therefore, I am convinced that I will have the best chance to launch my career. Health is a fundamental pillar of human development. It is intrinsically linked to well-being and quality of life. Healthy populations are better equipped to contribute to their communities, driving economic growth and social stability. Good health enables individuals to achieve their full potential, both personally and professionally.

A degree in International Health Management will open doors to a variety of career paths. I will be able to work in international organizations (e.g., WHO, UNICEF), governmental health departments, non-governmental organizations (NGOs), healthcare consultancy firms, and private sector companies specializing in health services and products. Professionals in this field often hold influential positions where they can shape health policies and strategies at local, national, and international levels. This includes roles such as health program managers, policy advisors, and public health directors who develop and implement policies to improve health outcomes and address health disparities.

Talking about my future, as a son, I want to take care of my parents and be with them in their old age as I don't have anyone else to look after them. To take care of them, I have to be professionally and financially independent. I am confident of earning a decent amount in India to fulfill my social commitments to my parents and I am sure with my advanced qualification, I will be able to take myself to further levels. Thus, I assure you that I will return to India right after completing my studies in Germany. Thank you for considering my application, I am hoping that I will be given this chance to contribute to the University's achievements.

*Sincerely,  
Raj Donda*
